

Gabriel®

An ArvinMeritor® Brand

Don't leave the service bay without original performance shocks!

An increasing number of today's heavy trucks and trailers are equipped with low-friction suspensions such as air spring or taperleaf. The high performance demands and increased travel of these low-friction suspensions have made it more important than ever to have shocks that operate at peak performance levels.

This has elevated the status of the shock absorber to a critical component on today's heavy trucks and trailers.

So don't just replace – restore original performance with Gabriel shocks.

You can replace old shocks with new ones. Or you can restore original performance with Gabriel® shocks – because Gabriel shocks are the leading choice of heavy-duty original equipment manufacturers (OEMs). When performance, reliability, control and comfort are vital to your business, choose Gabriel shocks.

THE LEADER IN COMMERCIAL OE SHOCKS

RESTORE THAT NEW TRUCK RIDE WITH THE #1 HEAVY-DUTY OEM SHOCK

Fleetline™ Commercial Truck And Trailer Shocks

The Fleetline shock is designed as a direct replacement for the original equipment shock. It replaces the original equipment shock with a valving rate that compensates for initial truck suspension softening, providing performance that better matches the original ride. Built with original equipment quality components to ensure superior performance throughout the life of the shock, it also reduces wear and tear on other costly suspension and vehicle parts.

Advantages

- Reduces force-velocity variabilities and self-compensates for wear through a unique pressurized piston seal design
- Improves durability with cold-formed, 360° arc-welded eye-ring end mounts
- Prevents shocks from topping out and suspensions from overextending through the use of a hydraulic rebound stop – where required
- Improves fluid retention and provides longer life through its multi-lip piston seal
- 1-Year/Unlimited-Mile warranty

GasSLX™ Adjustable Commercial Truck And Trailer Shocks

The three-position GasSLX adjustable shock allows you to choose from one of three settings – Firm, Regular and Extra Firm – to match different applications.

The GasSLX shock incorporates a gas cell design, creating a physical barrier between gas and fluid, preventing aeration which can cause fade (reduction in damping force). This gas cell technology is a full-life feature and is better suited for longer-life commercial vehicle applications.

Advantages

- Improves gas retention and provides more consistent high temperature operation via advanced gas cell technology
- Reduces force-velocity variabilities and self-compensates for wear through a unique pressurized piston seal design
- Improves durability with cold-formed, 360° arc-welded eye-ring end mounts
- Increases durability through specially formulated high temperature fluid
- Provides advanced performance via a multi-lip viton piston rod seal and chrome silicon spring valving
- 2-Year/200,000-Mile warranty

Ultra™ Light Truck Shocks (G Series)

This advanced series of gas-charged shocks is computer designed to match the needs of light trucks, vans, RVs and 4x4s. It features a 1 3/8" bore design for consistent high performance.

Advantages

- Delivers the advantages of G-Force™ technology, including:
 - StableSteer™ valving – provides consistent response from all four shocks, giving you the safest, most stable ride
 - G-Force piston – features bonded-iron construction for durability and longer life
 - Leakproof piston seal – eliminates oil bypass for maximum shock effectiveness and performance
- 1-Year/25,000-Mile warranty
